

**IN THE SPECIFICATION:**

Please replace paragraph [0024] with the following amended paragraph:

61 -- With reference to FIG. 1, a first endless conveyor belt 11 is shown to be vertically disposed with respect to a second endless conveyor belt 13. This is a preferred disposition of the first endless conveyor belt 11 with respect to the second endless conveyor belt 13. The first endless conveyor belt 11 has a first end 35 (front end) and a second end 37 (rear end) and is moved by a conventional motor (~~not shown~~) system 10 in a first direction, for example a clockwise direction, as shown by the arrow 33. The rear end 39 of the second conveyor receives composite material (source material) in this preferred embodiment. Side walls 42 are provided in either side of the conveyers such that walls 42, the bottom surface of the first endless conveyor belt 11, and the top surface of the second endless conveyor belt 13 together form an enclosure within which the source material is located. While side wall 42 is depicted as transparent in FIG. 1 to show the interior, of course, an opaque side wall 42 may also be employed.--
